

## Cheenfort Enterprse Co., Ltd.

Cheenfort Enterprse Co., Ltd. was founded in 1986 and has been a professional customer-oriented weaving mill. We constantly develop environmentally-friendly synthetic fabrics.

In the beginning, we started with only 30 sets of Cheche-made water-jet looms. Until now, we have covered the manufacturing process from warping to weaving. The advanced technology includes warping machines, Swiss Staubli auto draw-in machines, and 261 sets of Japan-made TOYOTA and TSUDAKOMA water-jet looms. The looms can offer 4-weft varieties with French-made Staubli doobby. Our monthly production can reach at least 1000000 yards. We help our customers to develop innovative fabrics at speed and quality.

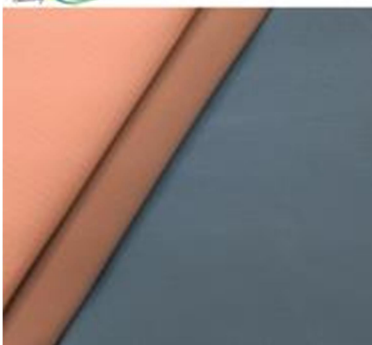

Cheenfort is specialized in polyester woven check fabrics, pants, filament & spun interweaving, T/C, T/L, poly/spandex, seersucker, moisture wicking, suedette, strong twist, water-absorbency, and functional fabrics. Due to the global warming issue, casual sportswear has been trendy. Therefore, we participated in recycling 4-way stretch fabric development with great achievement. Though our team is not satisfied with the current situation and will go ahead with high-valued "Smart textile", eg. graphene with thermal control and wicking, and bio-based recycled fabrics.

Cheenfort has been rooted in Taiwan for decades. We face challenges and welcome the changes. Our faith is that apparel is shown value only when people wear ....

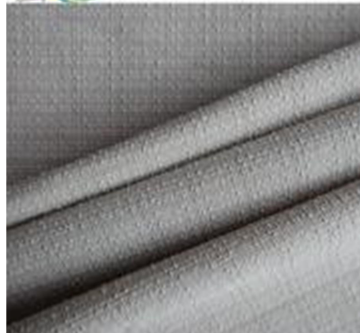

In 2020, we passed the CRS inspection (quality, security, environment, and social responsibility assessment), and GRS certification (Global Recycle Standard) in 2021. We believe the "Smart textile" is a breakthrough innovation and can bring consumers a "smart life" !
