

FU-CHI INNOVATION TECHNOLOGY

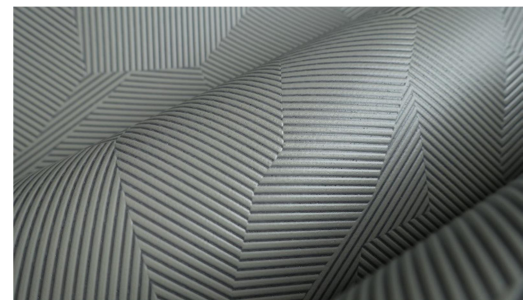

Sustainable and Eco-friendly Material Solutions

FU-CHI was established in 1963. We have been committed to developing various interior surface materials.

In Asia-Pacific region, FU-CHI is not only an indicator enterprise in the interior material of transportation as automotive, railway, aircraft, but also the indoor interior of home furnishing and public spaces. Besides, we worked with industry and outdoor operators closely.

Our product range includes fabric, genuine leather, synthetic leather (incl. PU, TPU, Silicone), and carpets. As well, we are capable of providing a total solution with design, development, manufacturing, post-processing services, and local support.

Aside from that, we can also provide a total solution to meet customers' requirements and make your design and needs come true.

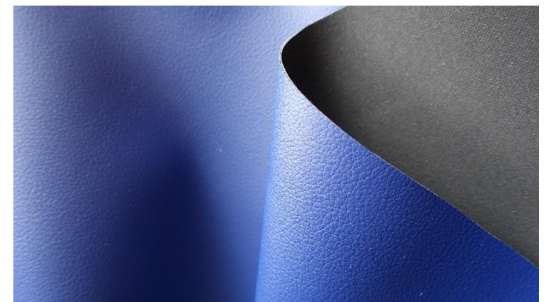

FU-CHI PU Brand Alexandra

This year, FU-CHI focuses on sustainable eco-friendly materials and presents two new types of surface materials in 2022 TITAS.

"Fantasia" , a perfect combination of natural and synthetic leathers

Through a recycling and manufacturing system, we collect natural leather scrap and made them into synthetic leather.

"Fantasia" contains the sustainable and eco-friendly elements with features of safety and durability. It can be a solution to replace genuine leather.

Fantasia

Eco-friendly suede fabric "Celestial"

Recycled PET Bottle Yarn can no longer meet market expectations.

By considering the impact fast fashion has brought on the environment, we decided to use recycled microfiber made from waste clothes to make a luxury suede fabric "Celestial" .

This is a solution for high quality and durability, and with a controllable cost at the same time.
