DEVELOPE CHIME ENTERPRISES CO., LTD.

Time to focus on our Environment

We, DECE, founded in 1994, specialized in woven functional fabrics for around 30 years. Our fabrics are from nylon, polyester, natural fiber and blended textiles. The finished products range from ski, outdoor, urban to fancy wears and blankets. With rich experience in this field, keeping reaching and developing recycled functional fabric is our mission, to reduce the impact on the environment.

We are focusing on the functional fabric with a light weight that is from used garments this year. We also add BIO DWR treatment on these recycled fabrics and they are more eco-friendly. These functional fabrics can be recycled again to have a circular economy.

Protecting our earth is our responsibility without any excuse. Only by doing this so can we survive peacefully on our earth. DECE always think of a better future & life for everyone.

Sustainable Concept

Circular Economy - recycled fabric from used garments

The diagram illustrates a circular economy process for recycled fabric. It starts with 'Retail/Consumers' (represented by a house and people) who use 'Garments'. These garments are then 'Collect'ed (shown with a truck). The collected garments go through 'Cutting' (represented by scissors) and 'Depolymerization & Refining' (represented by a factory). The refined material is then processed into 'Fabric' (represented by a roll of fabric), 'Yarn' (represented by a spool), and finally 'Chip' (represented by small squares). The process is shown as a continuous loop, with arrows indicating the flow from garments back to the start.

DURABLE WATER REPELLENT TECHNOLOGY

- PFAS-free
- Readily biodegradable
- Free from isocyanates and formaldehyde
- Inspired by nature

Icons at the bottom left include: BIO, a circular arrow, a globe, a water drop, a recycling symbol, and a CO2 symbol.
