

OSHIMA CO., LTD. The smart way forward

In addition to our AI fabric inspection machine, which we are excited to present at TITAS this year, Oshima is also proud to demonstrate our fabric-spreading machine, which has full real-time monitoring capabilities and enables you to watch your manufacturing line from anywhere.

Our 2.0 AI fabric inspection machine provides you with a deeper database, a competitive offer, and an even more precise fabric fault position.

While the sewing machine often steals the spotlight in a garment factory, but the fabric inspection machine and the spreading machine handle the preliminary chores that prepare the fabric for the sewing process, making them crucial components of the production line. Furthermore, they contribute to a greater overall production time efficiency and accuracy.

Oshima's dedication does not end with innovation. In an era where sustainability is critical, we are leading the way toward greener production. Our machines are not only designed to maximize industrial efficiency, but also to reduce waste, resource consumption, and overall carbon footprint. Embracing sustainable manufacturing is more than a choice for us; it is an obligation.

Innovation isn't simply a buzzword at Oshima; it's our driving force. As we move forward, our goal stays the same: to offer our customers the best in production optimization while upholding our commitment to a greener planet.

If you share the same value and would like to get to know more information, please visit our website <https://www.oshima.com.tw> or drop by our booth at M1014.
