## emtec Electronic GmbH

TITAS 2020  
Taipei Innovative Textile Application Show

### Company Profile

The company emtec Electronic GmbH with its office in Leipzig, Germany develops, manufactures and sells testing equipment to the pulp and paper as well as the nonwovens and textile industry. The different products can be used in many different steps of the production and converting of the mentioned industries. R&D, process and product optimization, trouble shooting and complaint management as well as the incoming control and quality assurance are the application areas of emtec test devices. Emtec is grounded in the paper industry. 25 years ago, the company started with only four people and one product. Today the company has around 32 employees, is also active in the nonwovens and textile industry, and offers 13 different devices with several modules in more than 80 countries with a global sales network of 32 independent representatives.
