## LIBOLON

### Promoting Green Recycled Fiber Products

At TITAS 2019, in response to the global issues such as climate change, natural resource depletion, industrial pollution and product safety, LIBOLON will showcase green products including RePET<sup>®</sup> eco-friendly recycled polyester yarn, ReEcoya<sup>®</sup> recycled dope dye yarn and NylonPlus<sup>®</sup> recycled nylon yarn based on the concept of circular water economy with high criteria and new vision.

LIBOLON extended its product lines to step into the categories of hi-tech knitted fabric and yarn dye. Its nylon yarn dye is produced via automated process with benefits of high color fastness, good hand touch and fast delivery, making it a prior choice of global brands.

Celebrating LIBOLON's first step toward its overseas expansion, at TITAS 2019, the company will present a variety of diverse products which interpret the way it moves towards a sustainable enterprise.
