Customized Green Jacquard – Endless Possibility

Junmay is pleased to debut new green Jacquard materials during TITAS2022 this year. This season, our R&D is focused on “Biodegradable”, “upcycled” and “recycled” fashion. While green materials have become fashionable and mainstream, we strive to provide endless possibilities of green yarn materials for the jacquard upper, fabric, and accessories to make your design unique and alive.

At Junmay fabric lab, we continue to research and develop state-of-art fibers to incorporate with our fabric structural engineering. This season, we will be showing materials featuring rPET Biodegradable jacquard, in-house production “trash” transformed materials, as well as other upcycled & recycled options.
