

Homer Zipper Co., Ltd.

Making Anything Possible

What is MAP? It is our slogan, Making Anything Possible. We don't fear the difficulty of overcoming the problem and achieving the goal.

In recent years, recycling has become a hot issue again. Homer Zipper at the TITAS Exhibition in 2022 once again proposes environmental materials with innovations in the zipper products in the exhibition.

For many years now, Homer Zipper has always regarded the application and development of environmental materials as an important task, and it is an important development goal with a high proportion in the company's R&D plan.

For example, your coat was made of PET, Nylon, and cotton with some metal parts. It is a multi-material product. It's hard to separate these materials when the clothes are at the end of their life. Few manufacturers can accept excessive costs and time-consuming operations. And then, it will be garbage. If we want to protect our earth, we need to change the situation, to reuse, reduce, and recycle. We believe that the mono-material is the first step.

Now, we have two different single-material zippers, PP and PET zippers.

In addition to the development of full PET and PP zippers, we have also developed many functional zippers, such as the Antibacterial Zipper, Luminous zippers, Photochromic zippers, Thermochromic zippers, and other color-changing series, so that our zippers are not only made in Taiwan but also environmentally friendly and fun.
