

ACME INTERGROUP CO., LTD.

Emancipate traditional thinking and open a colorful world

For the first time participation at the Taipei Textile Exhibition, ACME INTERGROUP CO., LTD intergroup will bring you a brand-new digital printing experience. Machine design that is original in Taiwan. Combining the technical advantages of "traditional industries", it is applied to the digital needs of "world trends". Let the advance progress without abandoning traditional technology, but also explore the world of digital printing at the same time, combining the advantages of traditional and digital, more flexible production and flexible use.

Substituting the thinking of the user, under the best consideration of space planning and practical application. ACME INTERGROUP CO., LTD implants the needs of buyers and the desire for new technology into the core, breaks the traditional thinking again and gives the product a transcendent positioning. And also let consumers have a new and diverse experience.

This year, our company is expected to exhibit the compact size digital printer on the market. And combine traditional screen printing to develop more diverse techniques. This digital printer adopts the latest technology VSDT of EPSON print head, which allows ink droplets of different sizes to be combined into a detailed drawing and soft image after calculation. It also greatly

ACME-P201

improves the beautification effect of color gradients. And also solves the technical problem of insufficient traditional colors. This machine conforms to MIT lightweight and high-quality design concept.

It breaks the old barriers, and makes a new design from the user's point of view, removes complicated internal structures and functions. And help users easier to operate. Coupled with the innovative printing technology of the new era, the traditional stuffy and airtight printing method can be improved. Hence digitally printed clothes can also have a soft and breathable feel.

ACME INTERGROUP CO., LTD hopes to combine "modern technology" and "traditional craftsmanship" and promote new technologies so that industrialists can take into account diversified production concepts and advance with customers along with the pace of the world
