

FU-CHI INNOVATION TECHNOLOGY

Fuchi Full Range One Stop Services

To fulfill diverse desires from customers is what Fuchi has always been pursuing. For the past 60 years, Fuchi keeps developing and improving for our customers. As diversification, customization, and composite of multiple materials become mainstream in the market, Fuchi's experience across different industries supports our customers in meeting their expectations.

We are capable of supplying various surface materials, such as textiles, genuine leather, synthetic leather (PU, TPU, silicone leather) and carpets. In the meantime, our professional service starts from design, engineering, production, post-processing, to local support. These elements bring total solutions to satisfy all needs of different customers.

Fuchi's textiles offer a wide range of applications, such as aviation, railway, automotive, office and home interior industries.

Fuchi's synthetic leather is the same case; the use in transportation, sporting accessories, bags, and medical products with reasonable MOQ to satisfy diversified needs.

We are also concerned about environment protection. To reduce carbon emissions, we develop plant-based materials and recyclable materials. We would like to introduce the following products to you in TITAS.

"Fantasia" is the perfect combination of genuine and synthetic leather.

The waste generated during the cutting process of natural leather is reused and incorporated into the synthetic leather manufacturing process.

Not only has sustainable elements, in line with today's environmental protection trend, but also particularly strengthens its safety and durability.

Plant-based vegan leather "Genesis" uses plant-based synthetic raw materials and has a leather-like appearance. Due to global concern about environmental protection, plant-based synthetic leather meets the environmentally friendly market trends without VOC (volatile organic compounds) and with carbon emission reduction.
