

ANY COLOR INTERNATIONAL LIMITED

Angel Light Yarn, the cutting-edge technology of circulatory health, is jointly launched by KOLLOS and Tainan Spinning Co.!

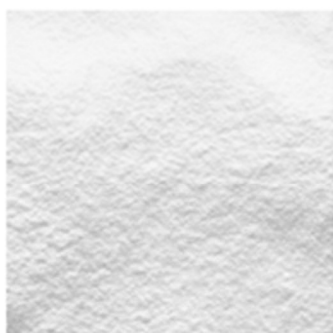

Circulatory health brand, KOLLOS, joined hands with Tainan Textile Group to launch the jointly developed **Angel Light Yarn**—Taiwan's flagship of the circulatory health industry! KOLLOS pioneered health technology in the world, and successfully reached three major milestones in the yarn manufacturing process. The emissivity of the far-infrared ray (FIR) in the process reaches 94~99% at room temperature, which can promote blood circulation with scientific evidence of exceeding 6 major standards for FIR products worldwide, shows that it is more professional, healthier, and safer than generic graphene materials. Angel Light yarn has been unanimously recognized by medical and industrial professionals, and has passed the testing certification of domestic and foreign authorities such as the Industrial Technology Research Institute, TTRI, SGS, and the Atomic Energy Council. Combined with ergonomics, it has launched a full range of healthcare products in wearables to promote circulatory health and relieve fatigue.

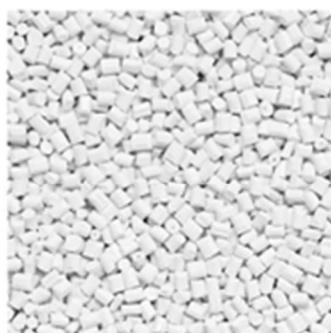

★Angel Light yarn, in the joint efforts of KOLLOS and Tainan Spinning Co., was launched in Feb. 2023.
(Left: Andy Wang, GM of Tainan Spining Co., Ltd.; Right : Wilson Ou, CEO of Angel Light)

Angel Light yarn particularly selects CZ zircon and other precise crystals to process into compound crystalline and transfers FIR energy from the fine polygonal structure of the crystal lattice. It is the only one in the industry testing zero harmful radiation from the raw materials and extracting high-quality of FIR in the wavelength of 4-14 μm , the most beneficial waveband

for the human body. The high efficacy of 94~99% of FIR is feasible at room temperature, just like warm care to boost blood circulation and shake off fatigue, breaking the industry's limitation that the release of 80% FIR requires heating at high-temperature. The FIR efficacy of finished goods made of Angel Light yarn will not be reduced after washing, and the blood flow rate and volume can be increased 55%~59% higher than it of traditional far-infrared fabrics.

洗動能粉末

洗動能酯粒

洗動能紗線

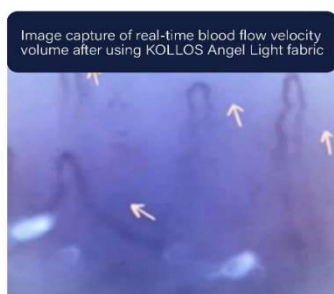

★Angel Light materials can be applied to a variety of products and industries.

KOLLOS is committed to providing premium, clean and safe circulatory health solutions. It is one of few brands designed and made in Taiwan across the Asia-Pacific healthcare market. Through the wearables, it is easy and convenient to enjoy the great health benefit of FIR.

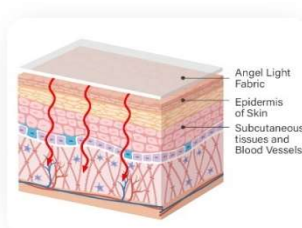

Kollos Angel Light

Angel Light premium grade far-infrared light

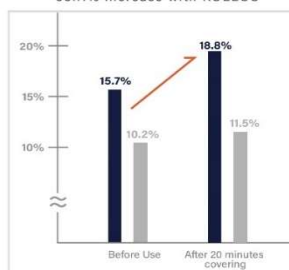

boosts blood circulation

Significant increase in
blood flow velocity

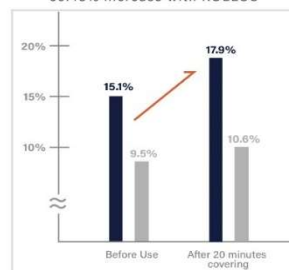

Test for Blood Volume Increase
55.11% increase with KOLLOS

● KOLLOS ● Generic Products

Test for Blood Flow Velocity Increase
59.48% increase with KOLLOS

TTRI Test Report at 25±1°C temperature
and 65±2% relative humidity

★It shows the efficacy of Angel Light materials in increasing flow speed and volume through FIR.
