

## Carol Textile Co., Ltd. One Earth, One World.

With the premise of sustainable development, “Stretch Your Life”, which Carol has always insisted, we will bring flexible options at the 2023 TITAS! Our goal for 2023 is “One Earth, One World “. Carol commits to providing various eco-friendly materials, hoping to let consumers know Carol all cares!

Based on “Stretch”, we combine sustainable materials such as recycled polyester and nylon, natural fibers, bio-based, and continue to explore diverse environmentally friendly possibilities. Focus on maintaining the color fastness, recovery, and breathability. Carol’s fabric presents two or more textures, achieving a multi-construction in one fabric, reducing weight and sewing; achieving carbon reduction and saving fabric waste. Body mapping™ awarded for the 24/25FW ISPO Textrends Award Selection.

Carol’s main thermal fabrics, such as Woven Fleece™ and Wool like™ woven appearances, interwoven with Fleece or Polar Fleece, have warm and water repellent effects in one fabric to reduce carbon footprint.

Carol has always adhered to the corporate philosophy of “Stretch” and “Sustainability”, integrating into outdoor sports. Let us immerse ourselves in every moment of exercise.
