

HITEX TEXTILE CO., LTD.

Hitex is a professional fabric supplier in the functional fabric field with over 20 years' experience. We have provided a wide range of functional fabrics for Asia, U.S and Europe. Since our founding, we have been dedicated to achieving the sustainable material and green manufacturing in products. To embrace our social responsibility toward workers and environment, we actively implemented Bluesign[®], GRS and Oeko-Tex[®] Standard 100 with third parties. The Hitex "Go Green" action was carried out from 3 ways:

- **Care more**

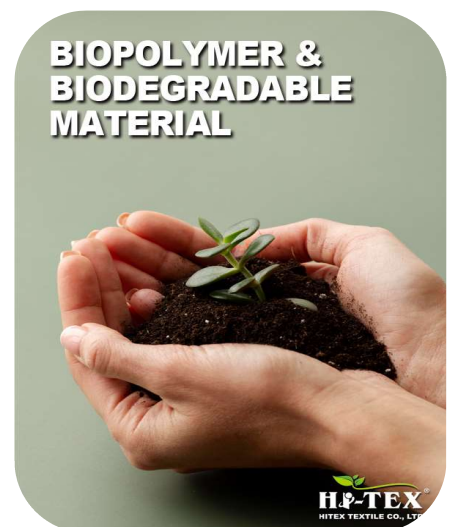

To care about the health and safety of the environment and workers which not only respond to the needs of customers, but also comply with global corporate standards.

- **Protect more**

To adopt environmentally friendly production processes and natural resources to enable us not just to preserve the textile sector but the entire eco-system. We deploy several programs, such as reducing electricity, water, and chemical consumption. Moreover, we have introduced PFC-free to all products and launched more recycling programs.

- **Act more**

Designing efficient business processes and strengthening the capacity for supply chain management can allow resource, energy, and transport costs to reduce unnecessary waste. From the production process, reducing electricity, water, and chemical consumption, as well as minimizing inefficient operations, will have a good influence.

To attain sustainable principles without losing competitiveness, new product creation, quality

enhancement, improved productivity, cost control, and gradually embracing green and eco-friendly efforts are the directions which we keep to make effects. For TITAS 2023, HITEX TEXTILE will keep the focus on eco-friendly products such as recycled fishing nets, fabric scraps recycling, biodegradable material and bio-based material.
